

Safer Construction for Community

آبادي کے لیے محفوظ قبیرات

Why Is Safer Construction Important?

This training conducted for local people and mason to understand safer construction. Many masons have not taken any training for safer construction. House owners can not identify whether houses built by non-trained masons are safer against earthquake. Local people should have fundamental knowledge of safer construction and ability for identifying safer or not as well as masons.

Objectives

- To have participants understand types of buildings and houses damages. To have participants realize importance of safer construction.
- To have masons understand how to construct safer houses
- To make knikage between local people and local masons To make strategy for safer construction in village level

- Many masons have not taken any training. Even after the earthquake of 2005, many houses were built by non-trained masons
- Buildings or housing damages are decided based on their structure
- Safer construction is important to reduce damages on people. Through promoting safer construction, we can make safer society.
